

**ZION**  
metaverse

**the White Paper**

# Abstract vision.

*“Emancipate yourselves from mental slavery.  
None but ourselves can free our minds.”* (Bob Marley)

Zi0n metaverse is the place for people united by free thinking with an ecosystem created by users for users.  
The title “Zi0n” includes two concepts: Zion from the Rastafari philosophy (holy land) and Zion from the Matrix:  
“The last human city, the only place we have left.”

Guided by these principles, we want to build a society that is not infected with the reality that the modern world offers us (**Babylon**), this aggressive marketing, immeasurable consumption and complete indifference to others.  
People of Zi0n believe in the victory over Babylon, and the reign of universal good throughout the Earth.

**It is a self-expanding metaverse, by analogy with the physical universe, developing on the Ethereum network.**

# Ecosystem.

The metaverse will originate and expand from **Genesis City** in **Promised land** - the main **community city** under the direction of the **elders**.

Since the metaverse will be in a decentralized space, there will be no censorship and propaganda,  
and society will have to come to a true cryptanarchic foundation (in the best sense of it).

However, in the first stages, some **covenants** will have to be observed,  
which will be approved by the council of **elders**, this is a kind of austerity to achieve the highest goal.

Everyone can choose whether he can occupy the vacant **land** on his own and to hermit or create their settlements, or settle in a **community city**.

In addition, some land will be distributed free of charge, by decision of the council of elders at the expense of **genesis funds** and only in certain cases.

In other words, people themselves can choose whether to be members of communities or to exist independently by exploring the metaverse.

The creation of personal and common goods will occur by the people themselves, communities and already existing NFT ever created.

# Socionomics.

Hermits | Community | Genesis

## Hermits

If you want to live away from the hustle and bustle, you can take a cozy place among the mountains and rivers,  
or in the forest or by the sea.

The principle of building the metaverse is such that cities cannot grow  
beyond a certain radius, so as not to harm nature.

## Community

A self-organizing group of people that can form from Hermits as well as come from outside.

The community organizes autonomous settlements in the selected territory, produces benefits and exchanges with other communities and individuals.

The congregation can create and propose metaverse improvements to Genesis by voting.

## Genesis

The Council of Elders of the Metaverse is developing and proposing innovations for the expansion of the Metaverse for public consideration.  
They can make changes to the landscape on the territory of the community settlement after the vote, which will be made by the community itself.

***{Thus, Zi0n metaverse in first stages will self-regulate through democratic interaction between groups.}***

# Tokenomics.

Personal | Community | Genesis | Donation

The distribution of benefits will initially come from funds received from the sale of land and donation to genesis. Part of the funds will be directed to the development of the metaverse, the development of **covenants**, the allocation of funds for projects created by people. The decision will be made by the council of elders of the community whose funds will be used.

## Personal funds

**Zi0n token** - A community controlled token that allows you to vote, receive goods, and exchange goods.

The initial capital appears when acquiring land.

## Community funds

Funds that appear with the agreement of a certain group of people to create their own community and when new members join.

## Genesis funds

Funds that go to the Genesis community, from the occupation of certain plots of land, the creation of communities, and donation from the community.

## Donation funds

Funds allocated from people and communities who sympathize with the idea will be fully directed towards the development of the Zi0n metaverse.

# Evolution.

As mentioned at the beginning, society will have to come to a cryptanarchic order, that is, to get away from any kind of centralization. and come to a conscious life, where in complete harmony there are various groups of people who bring the best to the metaverse.

The opening of the cross-chain between other metauniverses will accompany the spread of the idea and the exchange of experience.

Since the very idea of the metaverse implies, in the end, the transfer of consciousness to another dimension and the acquisition of immortality by a person, Zi0n metaverse has no development or time limits.
